

THREATS TO BEES AND OTHER POLLINATORS

Animal pollinators are vital to many ecosystems around the world. Insects such as bees and butterflies are essential to 90% of the world's flowering plant species. Their survival in the modern world is under threat, which could have disastrous consequences for plant and animal life across the planet.

There are some things we can do to help ensure pollinators' survival. Here are some actions we can take to make the world a better place for bees, butterflies, and other pollinators. For each, try to suggest which threat it addresses and how it solves that problem.

Let wild areas grow

.....
.....

Build a bug hotel

.....
.....

Grow a variety of flowers

.....
.....

Plant flowers year round

.....
.....
.....

Use less pesticides

.....
.....
.....
